

# **THE STANDARD MEASURE SERIES FORM 3**

## **END OF YEAR EXAMS 2023.**

### **2023 FORM 3 TERM 3 EXAMS**

### **FORM 3 CHEMISTRY PAPER 3 (CONFIDENTIAL)**

**Each student is provided with:**

1. 100cm<sup>3</sup> solution W, 0.1M HCL
2. Solid E
3. Solid Y
4. 250ml volumetric flask
5. 500 ml Distilled water
6. 1 pipette
7. 1 burette
8. 2 conical flasks
9. 1pipette filler
10. 1 label
11. 1 stand clamp and boss
12. 1 white tile
13. 1 filter funnel
14. 2 boiling tubes
15. 6 test tubes in a test tube rack
16. 10cm<sup>3</sup> measuring cylinder
17. About0.5g of sodium carbonate

**Access to:**

1. Means of heating
2. 2M NaOH solution with a dropper
3. 2M NH<sub>4</sub>OH solution with a dropper
4. 0.1M lead (II) nitrate solution with a dropper
5. Acidified potassium manganate (VII) solution with a dropper
6. 1M HCl solution with a dropper
7. Universal indicator
8. PH chart.

**NB:** methyl orange indicator

- Solid E is 2.86g of  $\text{Na}_2\text{CO}_3 \cdot 10\text{H}_2\text{O}$  weighed accurately.
- Solid Y is about 2.0g of  $\text{ZnSO}_4$  crystals
- Solid X is about 2.0g of oxalic acid
- 2M ammonia solution is prepared by dissolving 112cm<sup>3</sup> of concentrated ammonia solution in 1 litre.
- 2M sodium hydroxide solution is prepared by dissolving 80g of sodium hydroxide in 1 litre.
- Acidified potassium manganate (VII) is prepared by dissolving 3.2g of potassium manganate (VII) in 600cm<sup>3</sup> of 2M sulphuric (VI) acid and diluting to a litre.
- 0.1M hydrochloric acid is prepared by dissolving 8.6cm<sup>3</sup> of concentrated hydrochloric acid in 1000cm<sup>3</sup> of water.
